ABSTRACT

Background: Suicide remains a significant public health problem worldwide. The aim of this study was to assess the mortality trend of suicide in Serbia for the years 1991–2014.

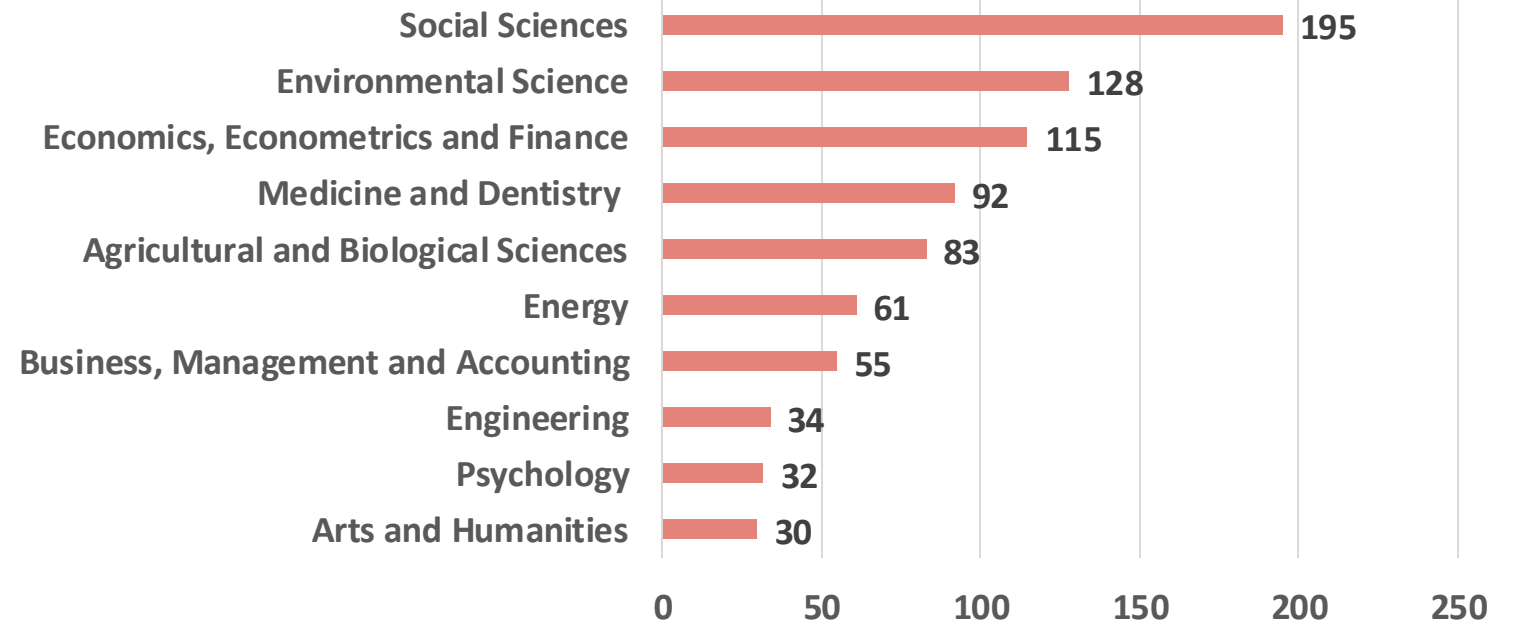

Methods: Data on persons who died of suicide and self-inflicted injury (site codes E950–E959 revision 9 and X60–X84 revision 10 of the International Classification of Diseases to classify death, injury and cause of death) were obtained from the Statistical Office of the Republic of Serbia. The age standardized rate was calculated by direct method (per 100,000 persons, using Segi's World population as standard population). Average annual percentage change (AAPC) with the corresponding 95% confidence interval

Using Eurostat data to teach statistics to prospective primary teachers: on how the context of the task may promote their social awareness

Francisca M. Ubilla¹ · Núria Gorgorió²

Accepted: 1 November 2023

Abstract

The concept of statistical sense provides an understanding of the goals of statistics education and helps to clarify the design of activities that promote the development of statistical literacy, reasoning and thinking. The new approaches to statistics in schools mean special attention must be paid to teacher training. This training should enable them to develop their statistical sense while awakening their social awareness. Drawing on the idea of the cycle of learning from data, we developed an activity based on data extracted from EUROSTAT, with the goal being to find out how the social issues underlying the data might play a role in the development of a socially critical stance among prospective teachers. We also wanted to find out how the complexity of the data presented might interfere with a satis-

Čovek lebdi u gondoli balona i nema pojma gde se nalazi – potpuno je izgubljen. Odluči da se spusti petnaestak metara iznad jednog polja i prodere se na ženu koja stoji na zemlji:

Čovek u balonu: „Možete li mi reći gde sam, i u kom pravcu se krećem?”

Žena na zemlji: „Naravno! Vi se nalazite na 43 stepena, 12 minuta, 21.2 sekunde severno; 123 stepena, 8 minuta, 12.8 sekundi zapadno. Takođe ste na 212 metara nadmorske visine. Trenutno lebdite, ali ste se na putu dovede kretali brzinom od 1.83 metara u sekundi, pod uglom od 1.929 radijana.”

Čovek u balonu: „Hvala! Uzgred, da vi možda niste statističar?”

Žena na zemlji: „Jesam! Kako pogodiste?”

Čovek u balonu: „Sve što ste mi rekli potpuno je tačno; dobio sam i više detalja nego što mi je bilo potrebno, a ništa od toga mi nije od koristi!”

Žena na zemlji: „O, Bože! A, da vi možda niste istraživač na nekom projektu ili donosilac odluke?”

Čovek u balonu: „Gospode! Kako ste to mogli da znate?!”

Žena na zemlji:

„Pa, ne znate gde ste, ne znate ni kuda idete. Dovde ste dospeli uz pomoć vrućeg vazduha, postavljate pitanja tek nakon što ste upali u nevolju, a nalazite se na istom onom mestu na kojem ste bili i pre nekoliko minuta, samo sad, eto, to ispade moja greška! ”

“Without data you’re just another person with an opinion”

- W. Edwards Deming

Decision Sciences (nauka o odlučivanju) je interdisciplinarno područje koje proučava procese donošenja odluka i razvija alate, metode i modele kako bi se pomoglo u donošenju boljih i efikasnijih odluka. Ova oblast kombinuje elemente iz matematike, statistike, informatike, menadžmenta, ekonomije, psihologije i drugih disciplina kako bi rešavala složene probleme u organizacijama i društvu.
